11 record(s)

All INSERT fields are editable. Foreign-key rules are still enforced by MySQL.

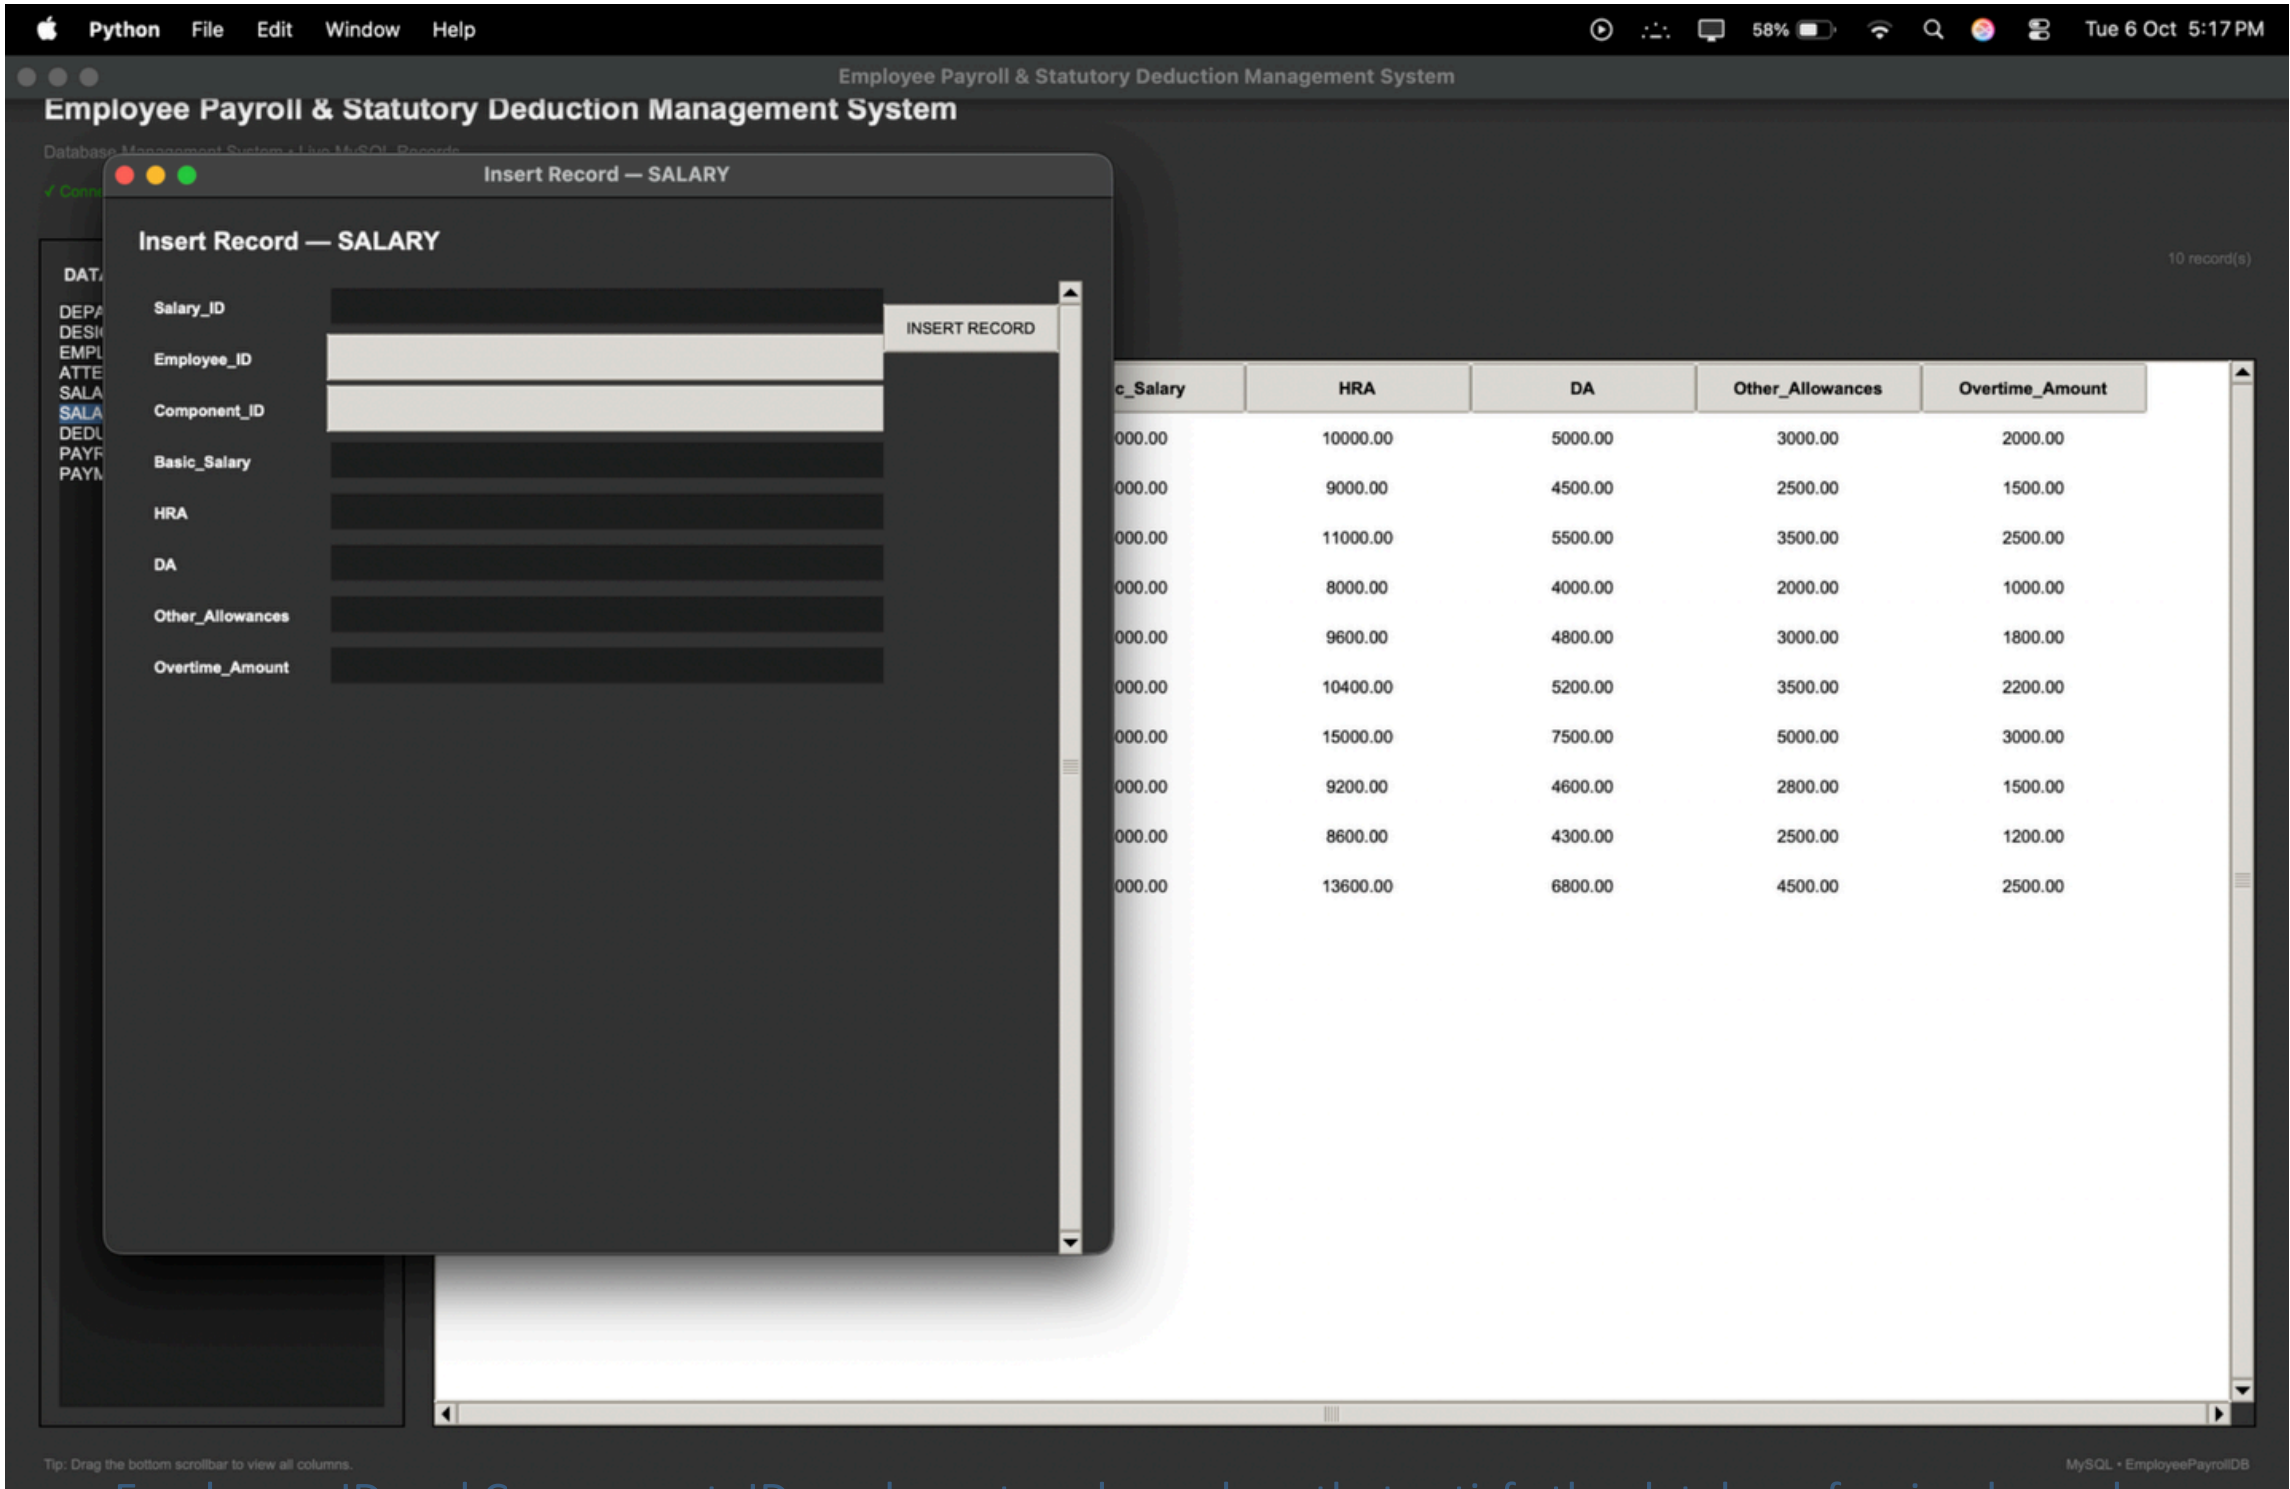

MySQL • EmployeePayrollDB

Salary_ID 511 is linked to Employee_ID 1011 and the row count increases to 11.

Employee Payroll & Statutory Deduction Management System

INSERT RECORD — EDITABLE FIELDS

The insert form allows the required fields to be entered directly.

Employee_ID and Component_ID can be entered as values that satisfy the database foreign-key rules.

DELETE RECORD

Select a row and click DELETE SELECTED.

Delete this record?

Salary_ID = 511

No

Yes

All INSERT fields are editable. Foreign-key rules are still enforced by MySQL.

MySQL • EmployeePayrollDB

WHAT THE UI DEMONSTRATES

The interface directly supports the required database operations.

- View / Refresh — displays live records from EmployeePayrollDB.
- Insert — adds a new record to the selected table.
- Delete Selected — removes the selected record after confirmation.
- All nine database tables can be selected from the left panel.
- MySQL constraints continue to control primary-key and foreign-key validity.

UI DEMONSTRATION FLOW

Simple sequence to follow during the presentation.

- 1. Open the Python UI and show “Connected to EmployeePayrollDB”.
- 2. Select DEPARTMENT or SALARY and click VIEW / REFRESH.
- 3. Open INSERT and enter a new valid record.
- 4. Show the inserted row and explain the live row-count change.
- 5. Select the inserted row and demonstrate DELETE SELECTED.
- 6. Refresh to prove the change is reflected in MySQL.
